FAMILY / LIVING
Shares a 2BHK flat with two colleagues

OCCUPATION
Marketing Associate, mid-size firm

> *"I already know what I want to buy — I just need the app to get out of my way and let me pay.*

GOALS

- Find and add everyday snacks, beverages, and essentials in a few taps
- Tell similar-looking products apart without opening every listing
- See the full payable amount, including fees, before reaching checkout
- Get through checkout without extra prompts breaking her flow

FRUSTRATIONS

- Homepage banners and offer carousels push what she wants further down the screen
- Product cards look alike, so she sometimes adds the wrong brand or size
- Comparing two similar items means opening each one separately
- "Frequently bought together" prompts appear right as she's about to pay
- Delivery or handling fees only show up on the final screen

STORY / SCENARIO

Ananya orders groceries and snacks two to three times a week between meetings, usually through Zepto or Blinkit, and rarely has more than five minutes to spare. The trouble starts on the homepage, where banners and recommendation rows sit between her and the search bar. Once she's searching, similar packaging across brands makes it easy to pick the wrong pack size, and comparing two options means backing out and re-opening pages. Just as she's ready to pay, add-on suggestions appear, and the final total — after delivery and handling charges — often runs higher than what she budgeted while shopping. She wants an app that respects how little time she has: quick to search, easy to compare, and honest about the price from the start.

Married; two children in school

OCCUPATION
Part-time school teacher & homemaker

> *"I plan my whole week around this one order — if items go missing or the delivery time is just a guess, my schedule falls apart.*

GOALS

- Complete one accurate weekly grocery order without items dropping off later
- Know a specific delivery window so she can plan the day around it
- Trust that coupons and discounts she applies show up correctly in the final bill
- Get a missing or damaged item resolved quickly, without repeated follow-up

FRUSTRATIONS

- Items that show "in stock" while browsing often disappear by checkout
- Delivery windows are broad — sometimes spanning most of the day
- The app once showed "Confirmed" while a support call said "Cancelled"
- A coupon she applied didn't reflect correctly in the final payable amount
- Reporting a missing or damaged item means multiple calls to support

STORY / SCENARIO

Kavita does one large grocery order a week for her family of four, switching between BigBasket, JioMart, and DMart Ready depending on offers and availability. She builds her list carefully around the week's meals, but items that appeared available while shopping sometimes vanish by the time she checks out, forcing her to rework the order. Delivery windows are often too wide to plan her day around, and she's had an order marked "Confirmed" in the app while a support call told her it was cancelled. When a coupon didn't apply correctly or a packet arrived damaged, sorting it out took several calls. What she wants is simple: an order that stays accurate from start to finish, a delivery time she can actually plan for, and a straightforward way to fix things when they go wrong.

USER JOURNEY · MAPA EPR SONA 01

Ananya Rao — Task: "*Reorder weekly snacks & beverages during a work break*"

Goal: Complete the order in under five minutes, with the right items and a clear final price

ACTION 1
OPEN APP & SEARCH

TASK LIST

- Opens the app during a short break
- Scrolls past homepage banners and offer sections
- Types the item name into the search bar

FEELING

Rushed

IMPROVEMENT OPPORTUNITY

Keep a persistent search bar visible above promotional content, so she isn't forced to scroll past banners to start searching.

ACTION 2
BROWSE & COMPARE

TASK LIST

- Scans a grid of similar-looking snack and beverage brands
- Opens two product pages to compare price and size
- Tries to confirm she's picking the right variant

FEELING

Confused

IMPROVEMENT OPPORTUNITY

Add a simple side-by-side comparison for brand, price, size, and variant, so she doesn't need to open each product separately.

ACTION 3
REVIEW & ADD TO CART

TASK LIST

- Adds the compared item to her cart
- Spots a second, similarly packaged item nearby
- Double-checks brand and quantity before adding it

FEELING

Uncertain

IMPROVEMENT OPPORTUNITY

Strengthen product-card hierarchy — larger brand name and quantity — so visually similar items are easier to tell apart.

ACTION 4
CHECKOUT

TASK LIST

- Proceeds to checkout
- Is shown "frequently bought together" suggestions
- Sees delivery and handling fees added to the total

FEELING

Frustrated

IMPROVEMENT OPPORTUNITY

Keep checkout free of upsell prompts, and surface an estimated final total — including fees — earlier in the browsing flow.

ACTION 5
TRACK & RECEIVE ORDER

TASK LIST

- Watches order status while finishing up work
- Gets a delivery notification
- Receives and checks the order

FEELING

Relieved

IMPROVEMENT OPPORTUNITY

Provide clear, real-time order status so she can trust what the app shows without checking repeatedly.

USER JOURNEY · MPA EPR SONA 02

Kavita Nair — Task: "*Place and track her weekly household grocery order*"

Goal: Get a fully-stocked order delivered within a predictable window, with an easy fix if something goes wrong

ACTION 1
BUILD THE LIST

TASK LIST

- Searches for staple items using everyday names
- Adds items one by one from her written list
- Reworks a search when a common term returns nothing

FEELING

Focused

IMPROVEMENT OPPORTUNITY

Improve search matching for everyday and regional item names, so common terms reliably surface the right products.

ACTION 2
CHECK AVAILABILITY & LOCATION

TASK LIST

- Confirms her delivery address is serviceable
- Checks which listed items are marked in stock
- Reviews the cart for any flagged shortages

FEELING

Anxious

IMPROVEMENT OPPORTUNITY

Show serviceability and stock status clearly and early, rather than letting gaps surface deep into the order.

ACTION 3
APPLY COUPON & REVIEW CART

TASK LIST

- Applies a discount coupon at checkout
- Reviews the cart total against the expected discount
- Notices the numbers don't fully match

FEELING

Uncertain

IMPROVEMENT OPPORTUNITY

Show a transparent breakdown — base total, applied savings, fees, and net payable amount — before the order is confirmed.

ACTION 4
CONFIRM ORDER

TASK LIST

- Places the order
- Finds two items automatically removed as out of stock
- Is given a broad, hours-long delivery window

FEELING

Frustrated

IMPROVEMENT OPPORTUNITY

Sync cart and stock status in real time with instant alerts on removals, and offer a narrower, more specific delivery slot.

ACTION 5
TRACK & RESOLVE ISSUES

TASK LIST

- Tracks the order as it moves toward delivery
- Sees the app and a support call show different statuses
- Reports a missing item after delivery

FEELING

Disappointed, then relieved

IMPROVEMENT OPPORTUNITY

Maintain one unified order status across app and support, and let users report missing/damaged items in-app with a photo — no repeated calls.
